

Advanced Medical Terminology

Overview

Advanced Medical Terminology builds on the knowledge gained in our popular *Introduction to Medical Terminology*. In five, three-hour sessions, participants cover the terminology associated with the eight major body systems. Discussions focus on the treatment and etiology of the disease conditions related to each system as well as the associated clinical procedures and laboratory tests. Lecture is supplemented with audiovisuals, case studies, and learner participation.

Benefits

Your non-medical employees who review and transcribe clinical data will become an integral part of the clinical research team. Employees spend more time comprehending clinical data than they do deciphering or misinterpreting clinical data.

- Accurate clinical data
- Drugs get to market faster
- Improved employee productivity
- Enhanced employee job satisfaction
- Increased employee interest in your company's products and services

Objectives

At the conclusion of this program participants are able to:

- Recognize advanced medical terms associated with various body systems
- Identify surgical technology used with the various body systems
- Recognize laboratory tests and their values associated with various body systems
- Discuss the clinical procedures used on various body systems
- Relate the practical applications of using medical terminology with case reports, autopsy records and x-ray reports

Curriculum

Our standard instructor-led program addresses the following body systems:

Cardiovascular	Respiratory	Endocrine
Renal	Circulatory	Gastrointestinal
Immune	Nervous	

Options

Corexcel will customize the curriculum to emphasize specific body systems or disease conditions most pertinent to the organization's focus. Additionally, instructor-led programs can be adapted for delivery on audiotapes, CD-ROM, Internet or Intranet.

Accreditation

Corexcel is nationally accredited as a provider of Continuing Education in Nursing by the American Nurses Credentialing Center's Commission on Accreditation (ANCC) and is an authorized sponsor of the International Association of Continuing Education and Training (IACET). The Association of Clinical Research Professionals (ACRP) accepts ANCC recognized courses for continuing education credit towards CCRC and CCRA Re-certification.
