

Basics of Medical Terminology

Overview

Basics of Medical Terminology is a customized course that introduces employees to your company's major therapeutic areas, selected products, related body systems, and the most common anatomical and diagnostic terms associated with your products. Participants learn how medical terminology is structured and how to recognize word roots, prefixes and suffixes. Exercises and case studies reinforce the course content. Course length varies based on the number of therapeutic areas, products and body systems covered.

Benefits

New hires and employees who work with medical terms will process information more accurately and faster as they gain an understanding of disease processes and associated medical procedures. Employees spend more time processing data as they gain confidence with their new language skills.

- Higher quality data
- Improved employee productivity
- Enhanced employee job satisfaction
- Increased employee interest in your company's products and services

Objectives

At the conclusion of this program participants are able to:

- Facilitate reading and terminology use in every day correspondence
- Learn process to break down and interpret unfamiliar words
- Familiarize participants with prefixes, suffixes and word groups
- Focus on specific therapeutic areas, related products and terms
- Stimulate interest in further medical terminology course work for successful students

Curriculum

The standard program addresses the following body systems:

Cardiovascular	Immune	Reproductive
Respiratory	Endocrine	Neurological
Cardiovascular	Immune	Reproductive

Options

Corexcel will customize the curriculum to emphasize specific body systems or disease conditions most pertinent to the organization's focus. Additionally, instructor-led programs can be adapted for delivery on audiotapes, CD-ROM, Internet or Intranet.

Accreditation

Corexcel is nationally accredited as a provider of Continuing Education in Nursing by the American Nurses Credentialing Center's Commission on Accreditation (ANCC) and is an authorized sponsor of the International Association of Continuing Education and Training (IACET). The Association of Clinical Research Professionals (ACRP) accepts ANCC recognized courses for continuing education credit towards CCRC and CCRA Re-certification.
